

Spotlight StartUp™ Services

Introduction

Often customers new to Teradata's unique capabilities need assistance to implement the Teradata database and its Business Intelligence/Analytic architecture. The new options for Teradata on-and-off premise, software and hardware choices and new cloud implementations on AWS, Azure and Teradata Intellicloud™ give customers additional choices. But, new customers may also need help with initial acquisition and setting up the Teradata ecosystem. Teradata is a massively-parallel database environment. To the BI/Analytic user, and even the Database Administrator, Teradata looks to be a SQL platform similar to other database systems but able to process massive volumes of data much more quickly. However, to achieve these capabilities there are several best-practices that, when implemented correctly, ensure Teradata's optimum operation and maintainability. Spotlight Technology's StartUp™ Service is designed to get customers up and running...and up-to-speed quickly on Teradata's unique capabilities and optimum performance. Even existing customers can benefit from these Services unique to Teradata capabilities.

Overview

Spotlight Technology's StartUp™ Service includes assistance with any or all of the following major capabilities:

- Architecture Consulting
- Configuration
- Ecosystem Setup & Implementation
- Database Structural Design
- Users/Roles/Profiles
- Viewpoint™ Setup and Implementation
- System Utilization and Workload Recording
- Teradata Tools & Utilities
- DBA Management Tools
- Teradata Optimizations and Initial Best Practices
- Initial Business Intelligence and Visualization

Spotlight Technology is an authorized Teradata partner
Spotlight Technology is a Tableau Technology Partner
Teradata™ is a registered trademark of the Teradata Corporation
Tableau™ is a registered trademark of Tableau Software, Inc.

Unique Capabilities

Even the most seasoned IT professional realizes that there is a "learning curve" with every new technology. Implementing Teradata is no different. Designs and optimizations that work on one technology (e.g. Oracle™, SQL Server™, Azure™, etc.) aren't necessarily best for Teradata. Spotlight Technology's StartUp™ Services are uniquely designed to not only get Teradata up and running quickly, but also provide knowledge transfer to in-house IT professionals for ongoing success.

Added Products/Services

Additionally, Spotlight offers a variety of Products and Services for the Teradata marketplace. Each product and service is integrated where applicable to use the deliverables of other Spotlight Products and Services.

- StartUp™ - Teradata Best Practices Implementation
- TuneUp™ - Performance Optimization
- CheckUp™ - System Utilization and Capacity Planning
- LockUp™ - Database Attribute Encryption-at-Rest

Summary

Spotlight's goal is to assist new and existing customers to make optimum use of their Teradata environments. Correct initial setup and "Startup" is crucial to a successful implementation and smooth ongoing operation. Spotlight Technology's StartUp™ Services are uniquely designed to allow mid-tier Teradata customers to choose the services they need to be up and running quickly at a cost suitable for SMB businesses.
